

High resolution diffusion tensor imaging of adult and neonatal mouse hearts

G.J. Strijkers, P.R. Seevinck, A.M. Heemskerk, A. Vilanova, W.M. Blanckesteijn, E. Heijman, K. Nicolay

International Society Magnetic Resonance in Medicine, 2005, p. 1664.

Abstract

The aim of this work was to develop a high-resolution 3-dimensional DTI method to determine the cardiac muscle architecture of ex vivo adult and neonatal mouse hearts, which will enable the study of mouse myocardial development in health and disease.
